

To Whom It May Concern,

Michael Brown was a Mechanical Engineering Intern with iRobot Corporation. He worked regular hours, approximately 40 hours per week, between April 29, 2013 and August 16, 2013 and part time, approximately 20 hours per week, between September 2, 2013 and January 3, 2014. He reported to me, but had the chance to work directly with several engineers at iRobot.

Michael worked on several tasks while at iRobot to support the sustainment of current products and the development of next generation robotic vacuum cleaners. During much of this internship Michael was a dedicated intern on a new development project and supported the engineers by performing testing, prototyping, and some design tasks at a system level and at the lower level, mechanical subsystems and components. Michael contributed at a high degree on the projects he was assigned and was regarded as one of the top interns.

I would appreciate the opportunity to work with Michael in the future.

Sincerely,

Jim Lindsay
